

System Novatek strong

The **NOVATEK STRONG** security system is implemented with frame panels and posts section of **50x50 mm.**; the coupling is done by “passing through” screws. The system is mainly used by those who have to delimit hazardous areas and must ensure a high level of impact resistance. Also the section of the upright 50x50 gives a greater guarantee of strength from the visual point of view.

Modular

Each component has been studied to be able to be modular, in fact the same panels act both as fixed elements and by using our kits, they transform into hinged or sliding doors.

Visibility

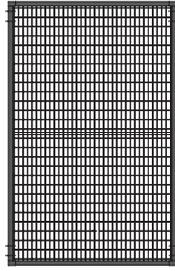

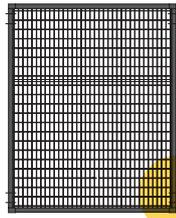

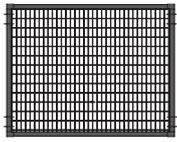

The innovative system of the 32x67 mm. and Ø3 mm. wire combined with the black color of the panel improves the visibility of the machinery inside the protected area.

Solid

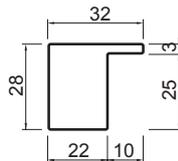

The Novatek panel has a welded mesh inside the profile that gives it a greater elegance and rigidity.

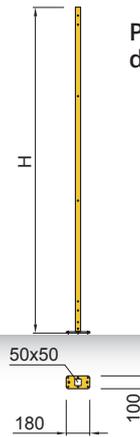

Panels dimensions

Net 32x67 mm wire Ø3 mm
ground clearance 100 mm

Post dimensions

Upright

The upright is a fundamental element to ensure high impact resistance, in fact the 50x50 upright is made with welded plate and allows greater resistance compared to traditional upright with section 40x40.

Installation is much faster than traditional systems with feet, the position of the holes, allows fixing the upright to the floor without moving it from the desired position.
