

## Systems

# TECHNO

## H=1400

The Techno H=1400 security system is made up of mesh panels with Ø3 or Ø4mm wire and uprights section 40x40 or 50x50; the coupling is made by pressed iron plates and through-bolting screws. The system is mainly used by those who must hazardous areas and must guarantee high impact resistance combined with impact resistance combined with high flexibility.

The Techno H=1400 complies with EN ISO 13857.

The high risk table, in fact, indicates that 'no protective structures of a height less than 1400mm without additional safety measures'.

**It can be used with the Techno panel H=1840 to reach a height of H=3250**

### Cheap

The costs are minimized because it is made as a self-supporting fence.

### Modularity

Techno system was created with the right aim of being interchangeable with other systems: hybrid structures can be realised where the framed system is mounted in a determined zone and in the adjacent one can be placed the Techno system. The doors themselves, are type Novatek series Ø3mm wire.

### Visibility

The innovative system of the 32x67 (wirenetting) improves the vision of the machinery inside the restricted area.

### Modification on place during installation

This system has the big advantage to be changed on place, with the use of a few Tools and it does not have to be repainted afterwards.

Mesh 32x67 mm wire Ø3 mm - Ø4 mm  
 Floor light 160 mm for panels - 100 mm for doors

### Panels dimensions TECHNO Ø3

Item N°	Base	Height	Color
