

QUICK NOVATEK

QUICK NOVATEK is a kit designed exclusively to reduce installation time and make installation even by a single operator. It consists of 3 stirrups specifically designed to make the product conform to current norms. A key requirement for fixed guards is that they must be fixed by systems that require the use of tools for opening, and should not be able to stay at their place without their fixings.

On completion of work the kit must be removed.

This kit facilitates mounting because the lower brackets allow proper alignment, thus reducing installation time.
